

**MULTI USE  
REEL WRAP  
5 USES IN 1**

**LIMITED  
EDITION  
SOAKER BOTTLE  
INCLUDED**

**REEL RAPZ®  
URBAN FROG TACKLE®**

*"Carp fishing may have just changed forever"*

ARE YOU PREPARED TO

**CATCH MORE & BIGGER?**

Super charge your mono • Make your mono heavier than fluorocarbon • Make your mono super supple  
The ultimate in presentation • Soak & sink your braid / anti frap • Line guide / baiting controller

The first dedicated line installation wrap  
Reel protector – the first dedicated reel handle lock  
Spool / line protector

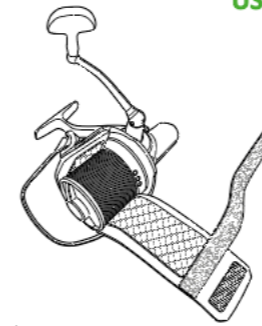

All supplied within a retention pouch / packaging that can be reused to safely store all components for ongoing use.

- Unique patent pending design.
- Adjustable for all Carp Reels.
- Manufactured from waterproof high-grade neoprene.
- Soft touch – Velcro receptive outer shell for intricate adjustment.
- Multi use retention strap for securing and adjusting your RAPZ.
- High quality silicon labels with hook Velcro adjusters.
- Super absorbent Inner bamboo anti-Microbial towelling

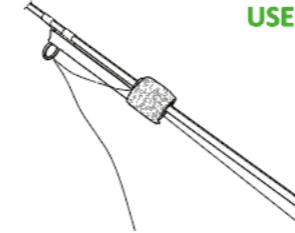

- Inner Velcro attachment strip to suit all spool line positions.
- Removable towelling to soak – re-position – clean.
- Limited Edition Soaker bottle – Non drip – controlled application of water onto the spool – apply lake water or bottled water.

**USE 1 LINE SATURATION - SOAKING MONO & BRAID WITH WATER**

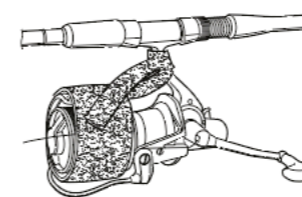

Soak line using the REEL RAPZ prior to going fishing, arriving at the lake with fully soaked lines. Supports slack line fishing. Fully saturated lines sink extremely well, hugging the bottom contours of the lake, preventing line bites and spooking fish from the off and aids getting that quick bite and catch from the start using the REEL RAPZ. No more fake alarm bleeps overnight shocking you awake, having to pay out line overnight due to your mono or braid taking on water and sinking or having to continuously reset your bobbins or swingers. Fully saturated from the off. Aids removing line curl/twist, fully soaked lines become extremely supple. Eliminates frapping, wind knots in braided mainlines, Spomb/Spod rods, marker rods etc. Aids Braid to sink more easily. It's like fishing perfectly from the off, like your lines have been in the water for 24hrs. Absorbent mono lines become heavier than Fluorocarbon lines.

**USE 2 LINE INSTALLATION – LINE CLEANING/ LUBRICATING**

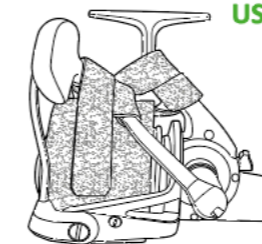

The first dedicated line installation wrap, aids putting line onto the spool with controlled pressure with minimal effort. User friendly – ergonomic use, installing 300 – 600 yards of line on in minutes if not seconds with minimal effort. No more trying to hold a damp rag & the line high up on the rod whilst trying to reel hundreds of yards of line onto the spool one handed – whilst balancing the butt of the rod between your legs. Aids cleaning detritus / algae from the line when reeling in, Aids controlled application of lubricants / sinking agents on to the line.

**USE 3 GUIDE- CONTROLLER**

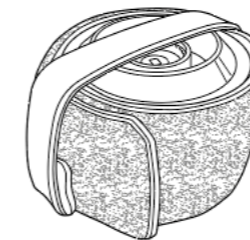

To aid the controlled use of BAIT BOATS – BAITING POLES/SPOONS. Preventing the line spooling off the reel and becoming caught on your set-up, on ground debris, brambles, roots etc. Allowing the Angler to concentrate on baiting the swim effectively, not prematurely dumping the bait short ruining your swim. Bait effectively first time every time.

**USE 4 REEL HANDLE LOCK - PROTECTS THE REEL**

Locks the reel handle in place  
Protects the reel body from chips / damage from contact from the reel handle in transit and storage. Prevents loss of the reel handle when unwound too much.  
Protects the Reel when stalking.

**USE 5 SPOOL – LINE PROTECTION**

Protects the Spool – Protects the line  
Importantly protects the delicate Spool lip. Protects whilst on the Rod. Protects the reel in transit or in storage. Protect your spare spools you take to the lake. Protect your spare spools at home/garage.

**No more kneeling by the muddy lake side  
No more splashing water over the reel  
No more damaging the reel by submerging it in the lake**
